DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Adams et al. (5,541,662).

Regarding claims 1-4, Adams discloses an interactive video system showing a primary analog video signal input line (14, 16, 18), a primary analog video signal interface unit (14, 16, 18), a screen image processing unit (52, 56), an information data storage unit (54, 60), and an information display unit (12).

Regarding claim 7, see Figure 8.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Adams et al. (5,541,662).

Application/Control Number: 10/773,430 Page 3

Art Unit: 2622

Regarding claim 5, Adams does not specify that the screen image-processing unit analyzes the source screen to determine whether there is a significant content change in selected image areas and only stores the distinguishable revisions of screen image contents as claimed. The Examiner takes Official Notice that using a motion detector to detect motions in a video signal is well known in the art because it enables a compact video compression. For instance, MPEG standard uses motion adaptive compression schemes for compressing motion signals, which is the same standard mentioned by Adams in col. 4, lines 6-9. Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to include a motion adaptive compressor into Adams so that the memory space could be conserved.

5. Claims 6, 8-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams et al. (5,541,662) in view of Fitzpatrick et al. (5,262,860).

Regarding claim 6, Adams does not specify the transforming feature as claimed. Fitzpatrick, from the similar field of endeavor, discloses a text and bar code recognition system. By recognizing the textual or bar code information on a display image, the interactive functions of a television receiver can be further enhanced. For instance, a telephone number displayed on the screen in Fitzpatrick can be automatically recognized, dialed, and displayed without the user intervention. Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the text and bar code recognition system of Fitzpatrick into Adams so that additional information could be obtained directly from the video signal without using additional bandwidth.

Application/Control Number: 10/773,430 Page 4

Art Unit: 2622

Regarding claims 8-18, see the corresponding rejections as set forth above.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Pack (5,488,426) shows a character recognizer for an automatic clock-setting apparatus.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Lee whose telephone number 571-272-7349. The examiner can normally be reached on Monday through Thursday from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David L. Ometz, can be reached on 571-272-7593. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
